

Cloudei Named an OpenAI Select Partner

Jakarta, Indonesia — July 31, 2026 — Cloudei, a multi-cloud and AI solutions company based in Indonesia that helps businesses modernize their infrastructure and unlock intelligent automation, today announced that it has been named an OpenAI Select Partner within the OpenAI Partner Network.

The OpenAI Partner Network is a global program for partners to build, sell, and deliver AI solutions with OpenAI. It brings together partners with deep industry expertise, delivery capabilities, and customer relationships while equipping them with resources, enablement, and support to help enterprises adopt OpenAI frontier models and products and turn them into measurable impact.

As an OpenAI Select Partner, Cloudei will continue working with OpenAI to help organizations build, deploy, and scale AI solutions responsibly and effectively. This work will help organizations get more useful work from every token and stronger performance per dollar with GPT-5.6, while using ChatGPT Work to turn ambitious goals into finished work.

“Being named an OpenAI Select Partner is an important milestone for Cloudei. Indonesian organizations do not need more AI pilots — they need AI that finishes work. Our focus is on putting frontier models inside real business processes, where results are measured in campaigns delivered, decisions made, and hours returned to the team. We believe AI should deliver measurable business value, not just technology, and we are excited to help our customers turn that vision into reality,”

said Stifani Hanjaya, Director, PT Mulia Providentia Dei (Cloudei).

Cloudei Studio, the company’s AI content production platform, lets teams move from brief to finished asset in a single workflow. Users describe what they need in plain language — in Bahasa Indonesia or English — and the platform interprets the brief, structures it into production-ready prompts, and generates images, video, voiceovers, posters, and storyboards. Frontier language models sit at the orchestration layer, translating business intent into creative direction, while agentic workflows handle

multi-step production. Delivered as a credit-based SaaS platform, Cloudei Studio is used by brands and agencies to compress campaign production cycles from weeks to hours. It has also been deployed as a white-labeled production environment for a leading Indonesian consumer goods group, supporting its in-house advertising content pipeline.

Cloudei Studio works with organizations in financial services, consumer goods, and retail across three areas: secure enterprise deployment of generative AI, AI agents that automate multi-step business processes, and analytics that turn operational data into decisions. Its Intelligent Analytics engine interprets operational data, detects patterns, anomalies, and emerging risks, and delivers insights in real time so teams can act on them while they still matter. Cloudei also designs AI literacy and enablement programs that help enterprise teams adopt these tools in day-to-day work.

Looking ahead, Cloudei plans to expand its OpenAI-powered offerings by investing in AI talent, technical enablement, and solution development to accelerate AI adoption, shorten time-to-value, and help customers across Southeast Asia translate AI ambition into business outcomes. The company will build industry-specific AI solutions, intelligent agents, and enterprise automation capabilities while helping customers securely deploy and scale generative AI across their organizations.
